

3. Drive mounting support (Thunar fix)

This is what made your drives work:

```
doas apk add udisks2 udisks2-openrc gvfs thunar-volman polkit
```

Enable services:

```
doas rc-update add udisks2 default
doas rc-update add polkit default
```

```
doas rc-service udisks2 start
doas rc-service polkit start
```

Polkit agent for XFCE:

```
doas apk add xfce-polkit
```

Autostart it:

```
mkdir -p ~/.config/autostart
cp /etc/xdg/autostart/xfce-polkit.desktop ~/.config/autostart/
```

4. Fonts (your final minimal choice)

System fonts:

```
doas apk add ttf-dejavu
```

Bangla support:

```
doas apk add font-noto-bengali
```

Refresh font cache:

```
doas fc-cache -f
```

5. User groups (important for devices)

Check:

```
groups
```

If needed:

```
doas adduser $USER plugdev
```

(Only if USB mounting issues appear — often not needed once polkit works)
